800-393-4009

The square pin connection system used on the augers and extensions allows for easier, faster, trouble-free operation than ever before.

Adding extensions and changing auger heads is as simple as removing a single retaining pin.

By incorporating a unique square tube fitting in the connection, overall strength is increased and eliminates stress from the pin.

The advantage is seen during rotation. The extensions are not twisting directly against the pin but push against the corners of the square, eliminating the chance of broke or bent pins.

SPECIFICATIONS

AVAILABLE:

Standard Auger used for breaking hard soils and sampling of most soil types.

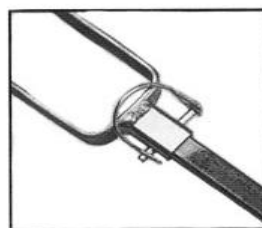

Clay Auger used for sampling compact clays and wet soils.

4 foot extensions

Rubber grip cross handle

Head Diameter - 2 3/4 inches

Pole Diameter - 3/4 cubed
