

Stainless Steel bomb sampler

The CONBAR stainless bomb samplers are manufactured from a high quality corrosion resistant type 302 stainless steel. The bomb samplers are designed to collect liquid samples from storage tanks, lakes, ponds, manholes, wells, and other hard to reach places.

The plunger assembly will be activated automatically when the sampler contacts a hard surface such as the bottom of a tank, or it may be activated by the operator at various depths with the use of a pull line. A Viton® "O" ring insures the integrity of the sampling chamber until the plunger is activated.

Item	Description	Price Ea.
5400	4 oz. 1 1/8" OD by 15"	\$249.00
5405	16 oz. 2 1/2" OD by 11"	\$446.00
