The dipper-T water level meter is accurate, reliable, and economical. The dipper-T uses the same ergonomically designed reel that is used for the Heron interface meter. The tape on the dipper-T conforms to US GGG-T-106E, a guarantee of accuracy.

Read water temperatures from 0° - 110°C with an accuracy of 0.1°C displayed directly on an LCD mounted on the control panel. No hand held readouts, cables or complicated charts needed.

A cascade proof 5/8 in(16mm) dia probe is attached to the tape by a strong flexible link that protects the tape at this vulnerable point. The wetted parts of the probe are stainless steel and Teflon®. The instrument is used to accurately measure the static water level in boreholes, wells, and standpipes and can be used to monitor water level changes during drawdown tests.

The dipper-T is the basic tool for well drillers, hydrogeologists and any other professional concerned with the study of groundwater.
