

Safety Cabinets

Justrite Safety Cabinets offer top performance for flammable liquid storage and protection.

Concealed self-close mechanism provides obstruction-free access to top shelf space (on self-close models).

Exclusive "spill catcher" shelves with built-in troughs catch incidental leaks and easily adjust on 2 1/4" centers for versatile storage. Heavy gauge galvanized steel is ribbed for extra strength to support a substantial 350 lbs. weight capacity.

Welded shelf hangers interlock with shelf to offer maximum "no slip" stability... and no flimsy brackets to lose.

Built-in grounding connector (on outside side panel) for easy grounding.

2" liquid tight containment sump with five gallon capacity, holds leaks and meets EPA requirements.

Adjustable leveling feet for balancing on uneven surfaces.

Highly visible tri-lingual warning label "Flammable - Keep Fire Away" (on front right door).

Fail-safe closing mechanism ensures three-point latching system works the first time, every time. Double key set included for security.

Fusible link holds doors wide open and melts at 165°F to automatically close (on self-close models).

Sturdy 18 gauge double walled steel with 1 1/2" of insulating air space.

Easy close, self-latching doors; handle does not require manual rotation to engage mandatory three-point latch for protection under fire conditions.

Continuous piano hinge provides smooth closure.

Durable, chemical resistant powdercoat paint finish retains high gloss look and minimizes the effects of corrosion and humidity.

Dual vents with built-in flash arresters strategically placed at top and opposite bottom.

Fully welded, not riveted, construction holds squareness for longer life.

Safety and Quality Assurance

Passes rigorous 3rd party testing by Factory Mutual Research. Meets OSHA and the National Fire Protection Association Standards
