**Low Flow Controller
w/Power Booster I LCD Controller**

The ProActive Econo-Power Booster I is engineered specifically for the Mega-Typhoon or the SS-Mega-Typhoon high performance pump. This Booster works on the philosophy of increasing the voltage output on a 12-volt battery. This ProActive Econo-Power Booster I will boost 12 volts to a constant 19 volts when it is hooked up to a 12 volt battery.

Simply hook the Econo-Power Booster I to a car battery and connect the quick connect Econo-Power Booster I adapter to the pump and the booster will turn on automatically. This device is engineered for rapid prging of groundwater wells.

The Econo-Power Booster I works optimal when the vehicle is on, idling, but not mandatory. The battery will not die, due to the fact that the alternator will be charging the vehicle's battery. On the other hand, if running this Booster without the vehicle idling may result in rapid battery discharge within 45-60 minutes if pump is continuously running.
