Item # P-10520

For even deeper wells, we introduce the Mega-Monsoon pump. This pump wields unbelievable pumping power! The Mega-Monsoon is capable of pumping up to 200 feet from ground level by simply connecting the pump to our revolutionary Low Flow With Power Booster III Controller. This Controller increases 12 volts to a constant 24 volts, (with higher amperage than the Low Flow with Power Booster II Controller.)

In return, the Mega-Monsoon will make your next groundwater sampling event go much quicker when it comes to purging a well. And with the Low FLOW With Power Booster III Controller, the field technician now has the ability to control the flow of water being discharged from the Mega-Monsoon thus, keeping up with EPA groundwater standards for Low Flow Sampling.
