**Beta Plus
Water Bottle**

The Beta Plus Water Bottle has rigid polyurethane (PU) End Seals with silicon gaskets pulled closed by a high-quality elastic (amber latex) tube. Designed and built for measurements to the nanogram/L level. When first lifted out of the water, some water will leak out until an inner vacuum is created to stop the seepage. This seepage exists with all Van Dorn style water bottles, which were originally designed by Dr. William Van Dorn at Scripps.

Requires Messenger for each bottle and a suitable Line for series sampling. Protect from damage during transportation and storage, and from sunlight by a suitable Carrying Case. Clear acrylic (TT) cylinder enables previewing before draining; also permits mounting a thermometer inside. Opaque PVC outer cylinder is tougher than acrylic and takes more abuse.

- **For Trace Metal Sampling at Least to ng/L**
 - **No Metal Touches the Sample**
 - **Vertical, Single or in Series**
 - **Horizontal, Only One on a Line**
- **Clear Acrylic or Tough PVC Outer Cylinders**
 - **Used for Shallow to Very Deep Water**
