FIELDMASTER

Mighty Grab Sediment Sampler

"Your Needs Are Our Business"

Toll-Free
800-393-4009

FieldMaster's Mighty Grab is designed to take repeatable, reliable, minimally disturbed bottom samples from vegetation and intermixtures of sandstone and other coarse debris located in firm clay bottoms.

Its stainless steel body is strong and heavy with extra large hinges which provide solid rigidity and durability. This unit is preferred by students, teachers, lakers, cottagers, volunteers and other supervised lay persons.

The Mighty Grab has a self-releasing trip mechanism that gives positive and reliable closing when the lowering line goes slack. Center-pivot closing action avoids sample disturbance while side plates prevent sample loss through lateral motion. The underlip helps push away small pebbles that prevent the scoops from closing. Safety locks prevent closing during transportation and storage.

SPECIFICATIONS

Sample Area:	95 x 165mm (3.75 x 6.5 inches)
Volume:	1.0 mL
Weight:	3.6kg
Scoops:	Stainless Steel (304)
