Velometer 6000AP

Contractors, balancing professionals, plant engineers, and industrial hygienists have preferred Alnor Velometer instruments for decades. They are used for HVAC balancing, static pressure measurements, energy audits, and more. Since these instruments use a swinging vane measuring technique, they do not require a power source or batteries.

The Velometer 6000 Anemometer includes seven different analog scales for measuring velocity or static pressure. Accessories probes to make velocity or static pressure measurements in diffusers, ducts, or in low flow conditions are available. The meter reads accurately in any position, making it easy to handle in awkward and hard-to-reach areas.

## SPECIFICATIONS

- The industry's most versatile instrument for air velocity measurement from 50 to 10,000 feet per minute
- Four velocity scales and one static pressure scale plus set of separate probes provides adaptability to dozens of applications
- Pitot probes for ducts, stacks and fans
- Diffuser probes for ceiling and wall diffusers, supply and return grilles
- Low pressure probe for paint spray booths, fume and laboratory hoods
- Static probe with inches of water gauge for static pressure checks
- One year warranty

<b>range</b>	velocity	0-300, 1250, 2500, 5000, 10000 fpm (0-1.5, 6.25, 12.5, 25, 50 m/s)
	static pressure	0-1.0, 10.0 inches H2O (0-25, 0-250 mmH2O)
<b>accuracy</b>	velocity	±2% of full scale,
	static pressure	all ranges ±5% of full scale
