## Chip Measurement System

*"Your Needs Are Our Business"*

Toll-Free  
800-393-4009

The direct-reading Drager Chip Measurement System (CMS) combines chemical-specific chips and an electronic analyzer for highly accurate and reliable gas and vapor measurements. With the flip of a switch, the Drager CMS provides quick results that appear on an easy-to-read LCD. The Drager CMS is ideal for industries where glass tubes cannot be used, or where it is not cost-effective to keep a monitor on-hand that requires sensors and calibration.

## SPECIFICATIONS

- Accurate and chemical-specific**
  - Integrated flow sensor for constant mass flow
  - Resistant to temperature and humidity effects
  - Precision optics detect the smallest reaction
  - Factory-calibrated chemical-specific chips
  - No interfering compounds
- Reliable**
  - System self-test on start-up
  - Battery level displayed on LCD
- Easy-to-use**
  - Menu-driven commands for easy operation
  - Barcoded chips mean no parameter entry needed
  - One-switch operation
  - Test results appear on an easy-to-read LCD
  - Quickly alternate between different chips
  - LCD text in English, German, French, or Spanish
- Economical**
  - Low-cost user training
  - No sensors or calibrators needed
  - Multiple readings on one set of batteries
  - 10 measurement channels (tests) on each chip
