

Protimeter Surveymaster SM

The Protimeter Surveymaster SM is a dual mode moisture meter used primarily for diagnosing dampness problems in buildings.

Scan mode (search) detects the presence of moisture beneath surfaces by using radio frequency.

This shows by means of colour coded percentage scale LED's. There is also a volume adjustable audible alarm synchronised with the display. In this mode the meter employs radio frequency emissions (RFE) to measure moisture throughmost wall and floor coverings including ceramic tiles.

Measure Mode gives a precise moisture level value in wood and other building materials from pin electrodes or deep wall probes.

This shows on the LCD display to one decimal place in terms of wood moisture content equivalent.

- Range : 6% - to nominal 100% moisture content
- Operation : Single push button
- Monitor - Automatic LED & LCD indicators
- Electrode : Built in needles
- Battery : 2 x AA alkaline
- Dimensions : 165 x 52 x 40
- Weight : 200g

Heavy Duty Moisture Probe -supplied standard with the Surveymaster SM.

Deep Wall Probe -supplied standard with the surveymaster SM.
