QWater 4" and 6" Production Series Well Developers

The Production Series Qwater Well Developers are reusable. Both the 4-inch and 6-inch use the same tough ABS body and molded 1.5-inch steel female NPT pipe fitting for attaching to a weighted wireline or drill pipe. Although the casing/screen wipers are also made of tough polyurethane, there are four wipers on each ABS body to ensure that the tool only needs to go in the borehole one time. The wipers can easily be replaced in the field with a regular slotted screwdriver to remove the stainless steel bolt and slide the spacers on and off the ABS body to replace or change wiper sizes (4-inch or 6-inch).

The new Production Series Qwater Well Developer surge block tools fit 4-inch and 6-inch Schedule 40 casing and screens. A check valve in the removable bottom of the tool allows for pumping sediments out of the well while surging. The 4-inch and 6-inch Qwater Well Developers can be used with a wireline (a cable attached to a 10-foot section of iron pipe) or drill rod.
