"Your Needs Are Our Business"

Designed to minimize the tedious task of manually pumping water by maximizing the mechanical advantage, the Wattera Lever Pump is a convenient tool that allows for quick sampling without the need for external power sources.

WATTERA LEVER PUMP well

It is intended for use in conditions where the wells are 30 - 100 feet when using the Waterra Standard System or 60 feet maximum when using the High Flow System. The design utilized easy to use quick release clamps for head clamp, discharge clamp and well clamp connections. The injection molded Delrin™ Rake Adjustment Knob Assembly simplifies the centering of the head clamp/tube over the riser simply by sliding the shaft into the desired position and tightening the knob.

SPECIFICATIONS

Weight: 8 lbs

Dimensions: 17" height x
2.5" weight x 24" length

Power source: manual

KEY FEATURES

Lightweight

Portable

Rugged field construction

Ideal for wells less than 100' deep

The reinforced, V-shaped side supports eliminate unwanted lateral movements, while the pivoting wrist at the head clamp provides a smooth and controlled upward and downward stroke for maximum mechanical advantage. Lightweight, corrosion resistant materials, finishes and a maintenance free design ensures years of reliability and portability.
