

EXTRACTION RESOURCES

# The Extractor

## (EX1.1)

### Description:

The Extractor is a state-of-the-art “well rescue” tool specifically designed for the **retrieval of lost objects from environmental testing wells, bore holes and drilling sites**. When used in the field, its rapid and precise extraction capabilities minimize costly delays and the need for expensive well redrilling.

The Extractor comes with two interchangeable Arm Tubes, **each strategically designed with different end tips** that provide "object specific" grabbing and locking capabilities.

The revolutionary Lock Off / Release tube is designed to Close & Lock or Open & Reset the grip arms instantly by simply pulling on the appropriate cable. This feature allows for **multiple attempts at locking onto the desired object in a matter of seconds**, virtually guaranteeing a successful extraction.

The (EX1.1) rental package comes with a **25mm Vevor pipe camera and a Lock/Release cable reel**. Camera Visibility is not necessary for The Extractor to perform efficiently, however it can be beneficial for enhancing the grabbing precision of the operator.

The extraction depth is only limited by the length of the camera cable requested at the time of the rental. **The (EX1.1) model is specifically designed to work most efficiently for object retrieval in 2", 3" and 4" pipe openings.**

*( A special EX1.2 model is available for object retrieval in 1" pipe upon request).*

Dimensions	Arm Tube	Lock-Off Tube	Camera System	Cable Reel
Height			20"	13"
Width	1.25"	.75"	11"	8.5"
